

What's inside

SASINO
agua purificada

www.sasino.org

To ensure quality of our water at the highest possible levels we utilize...

...three levels of filtration, a certified reverse osmosis system and continuous ozone saturation all being delivered with advanced North American equipment.

During the filling process, every bottle is washed using purified ozone water to guarantee 100% sanitation.

The heart of our bottle production is our unique 3-in-1 filling machine producing more than 9000 BPH in a sterilized environment.

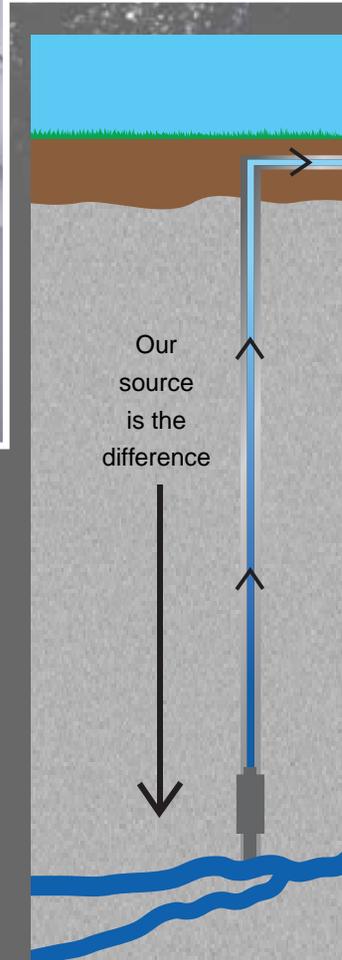

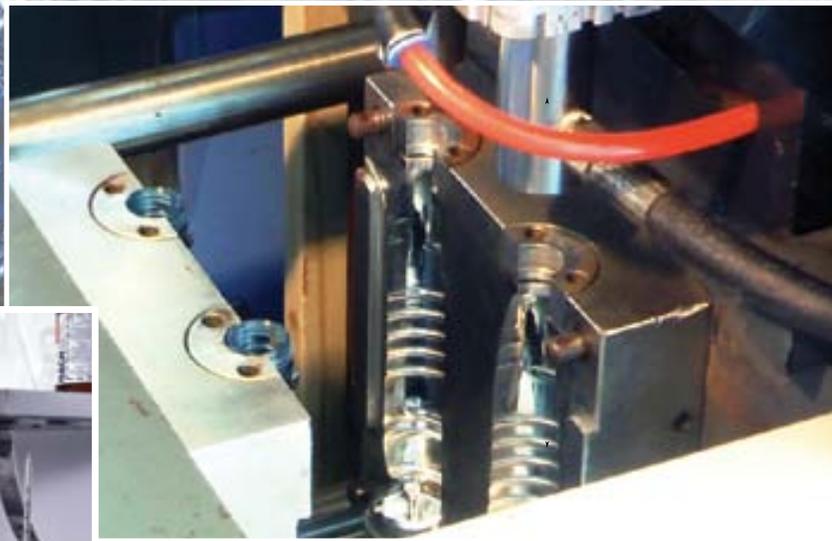

Automatic packaging line designed to meet our production demands.

Our North American equipment ensures high production, delivering a quality product.

Every 5 gallon bottle is washed using purified steaming soap water and rinsed with ozone for 100% sanitation and security.

Laboratory testing on a daily basis and manufacturing our own bottles ensures a guaranteed quality product.

Our process begins with sterile potable water deep within the ground far away from cities and towns.

Nuestra Compañia es inspeccionada por diferentes instituciones responsables de velar por la calidad de nuestros productos en el pais.

Sasino water originates from underground springs far away from the cities & towns. It comes from a place more than 150 feet deep within the ground, a source where the water is always clean and drinkable. Purified to perfection using reverse osmosis and the highest standards of quality we bring to you a water with exceptional taste that you can always trust.
